

DATA BACKUP & RECOVERY SOLUTIONS

Data loss happens. We work hard to protect your organization from losing data, but when human error is the #1 cause of data loss events, it's hard to avoid. The right backup solutions will help you worry less and stay productive in case of a problem.

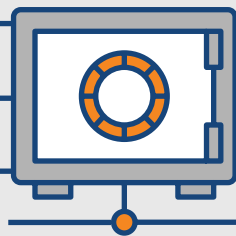

DataVault

Protects your server data and makes sure it's accessible in case of a failure, accident or malicious attack like a virus or cryptoware

Includes hardware, software licenses, management, monitoring and testing

Can be configured to function as a virtual server in the event of a crash

On-site and **automated** off-site storage options

Near real-time backups for server data, including **full system**, file- and folder-level restorations and Exchange mailbox recovery

Monitored 24x7 by WorkSmart

Offsite data replication to cloud-based storage

Cloud Backup

Automated backups for Office 365, Salesforce data and Google apps. WorkSmart's Cloud Backup provides a flexible, easy-to-use solution for the protection, management and recovery of your data.

CLOUD BACKUP FOR GOOGLE APPS

Google Docs, Drive, Calendar, Contacts, Sites and Gmail data is all secured using state-of-the-art encryption and gives immediate access to restored data

SALESFORCE DATA PROTECTION

Projects, calendars, campaigns, and customer activity are all backed-up and can be available in minutes if a data disaster occurs

Office 365

AUTOMATED DAILY BACKUPS FOR OFFICE 365

Protecting data from user error and delivering recovered files in seconds, including Email, OneDrive, and Sharepoint.

DataSafe

Automated **file-level** backup service for desktops and laptops

Great for executives who keep files locally on workstations for privacy, or for staff members who work remotely

Data is encrypted to ensure individual privacy and compliance needs

Unlimited cloud backup capacity per account, up to four computers per account

Available for both Windows and Mac platforms
