Cybersecurity Services

Cybersecurity isn't just important for big corporations. All companies are at risk for attacks by hackers who assume small businesses are not careful about security. Setting up a strong defense now is critical to avoiding big issues in the future.

ManagedShield Cybersecurity Basic Plan
The "must haves" for any organization

ADVANCED ANTI-VIRUS

Our hosted anti-virus service does not require additional server resources, and is managed and monitored by WorkSmart. It identifies viruses in two ways: 1) by the latest definitions of known viruses, and 2) by the behaviors and techniques used to create viruses so it can avoid attacks without having seen them first.

MANAGED FIREWALL

Firewalls are important for organizations of any size, serving as the protection between your internal network and the Internet. Our next gen firewall service provides the latest technology to protect your network from advanced threats, even while connecting to corporate data from remote locations.

MANAGED DNS

With users accessing the Internet from multiple devices in and out of the office, it is crucial to protect those devices and block access to your data before threats can reach you. WorkSmart offers Cisco Umbrella (formerly OpenDNS Umbrella), which uses the Internet's infrastructure to block malicious destinations before a connection is ever established.

SECURITY AWARENESS TRAINING

Today's employees are regularly exposed to email attacks that put business at risk, and training employees to recognize threats is an essential part of cyber security.

WorkSmart's Security Awareness Training and Phishing platform solution reduces malware infections, data loss, cyber theft, and employee downtime. It has an easy-to-use interface and includes baseline testing, ongoing training, regular phishing tests, and detailed reporting so you can be sure your team is the first line of defense against IT security threats.

ANNUAL SECURITY REVIEW

The WorkSmart team will review your organization's domain user accounts, including a report of inactive users, users with remote access, and domain administrator accounts. The team will create a desktop and server inventory and risk report, remote access review, and external security scan report.

ManagedShield Cybersecurity Plus Plan
Includes everything in our Basic Plan and adds:

VIRTUAL CIO SECURITY POLICY SERVICES AND PASSWORD MANAGEMENT

• Review of security policies and improvement recommendations

• Update or create new security policies and ensure all employees review them

• Password Security Management (through PassPortal) and Password Reset Self Service (through Blink)

ADDITIONAL WORKSMART SECURITY SERVICES:

Spam Filtering

Email Encryption

Password Management and Two-Factor Authentication

Device/Drive Encryption

Vulnerability and Penetration Testing

SIEM and Log Management
