

ManagedShield SOC // Security Operations Center Service

How do you know that your cybersecurity tools are effective?

Your organization has layers of IT cybersecurity tools protecting against threats, but without constant monitoring you may never find out about an attack. In fact, 68% of all breaches in 2018 took a month or longer to discover.

WorkSmart’s Security Operations Center (SOC) service combines **up-to-the-minute threat intelligence, and expert security engineers** to narrow the gap between attack time and response time.

How does SOC as-a-Service work?

SOC service constantly looks at your on-premise and cloud-based system logs for behaviors that indicate something is wrong, and immediately sends an alert to the security team.

Security experts review the data and provide remediation recommendations to WorkSmart so we can take action.
